DATA SHEET FOR AG DRY FORAGE & LIVESTOCK FEED NTKs

When you are finished with the test, the nitrate standard should have clear pink color. Your sample results may be slightly cloudy, but you will still be able to see pink color if enough nitrate is present. Record your results below and on the back if testing more than 4 samples.

Compare your results to the standard by holding your samples and standard against a white background for best results. You can use the back of these instructions. Determine whether your samples are less than, nearly the same, or greater than the nitrate standard color.

Use the Color Chart below to help with your comparisons.
 Note that parts per million (ppm) values are listed for both nitrate and nitrate-N, and that these values are based on wet weight.

Scale for Livestock Feed Test Kits:

0 ppm	1800 ppm	4500 ppm	9000 ppm	Nitrate content as ppm <u>nitrate</u>
0	400	1000	2000	Nitrate content as ppm <u>nitrate-N</u>

<u>Sample Number</u>	<u>Sample Description</u>	<u>ppm Nitrate</u>
	Example: northwest corner, collected 8/25/03	Close to, but less than 9000 ppm
